

## PURINA LIX All Stock NB

**0063643 – 125 lb**

**0061464 – 225 lb**

### What it is

Purina Lix Tubs are free choice supplements designed for Beef cattle, Sheep and Goats on medium to high quality forage diets (over 8% protein). Contains no animal protein products for use in natural cattle programs. The low moisture, cooked molasses products in non-returnable plastic containers will enhance intake and utilization of available forages, while reducing labor for producers.

### Features

Low moisture cooked molasses product technology

Natural protein vegetable sources

Positive associative effects when fed with low to medium quality forages

Provides optimum levels of trace minerals at a 1 pound consumption rate

125 or 225 lb non-returnable plastic container

No added salt

Supplement delivery method that fits a variety of production systems

### Benefits

Consistent intake and nutrient delivery that helps eliminate over consumption

Supplies modest amounts of vegetable protein to maximize animal performance in natural programs at an economical cost

Molasses provides readily-available energy to stimulate rumen fermentation that helps the animal extract more energy from the forage, as demonstrated by research showing increased forage intake and utilization

Aids in disease prevention, improves fertility, and promotes fetal development

Labor saving supplement delivery system that reduces the biosecurity risks associated with returnable containers

Intake is not regulated by salt as in other supplements; using salt to regulate intake results in consumption which can be unpredictable

Convenient supplement delivery system is ideal for small beef producers with other time commitments, as well as large producers who experience time and labor shortages

Vitamin E (min.).....	50 IU/lb

### FEEDING DIRECTIONS

**PURINA LIX All Stock NB** is designed to be self fed to beef cattle, sheep and goats consuming medium to high quality forage. Consumption of this supplement will vary depending upon the condition of the animals, quality and quantity of forages being fed, and seasonal weather conditions. Cattle typically consume from 0.5 to 1.5 pounds per head per day. Sheep and goats will typically consume between 1 and 6 ounces per day. Consumption should be carefully controlled until animals become adjusted to the feed. Additional care should be exercised with starved, stressed or debilitated animals.

1. Feed one tub per 20 to 30 head of cattle or 30-50 head of sheep or goats and at least 2 tubs per pasture to ensure adequate intake by younger, timid animals.
2. Place tubs in dry areas where animals congregate (loafing, grazing, feeding and watering areas). Increase or decrease tubs available to increase or decrease consumption of the supplement.
3. As with any "cooked-molasses" product, there will be times when forage quality, cow condition, or weather stress will make it necessary to provide additional energy and protein supplementation to meet animal needs in addition to that provided by **PURINA LIX All Stock NB**. In these instances, contact your local Purina representative for specific feeding recommendations.

**INTRODUCTORY PERIOD:** During the first week of use, place the tubs approximately 50-75 feet from the loafing and/or watering areas. As animals become acclimated to the presence of the tubs, some repositioning may be necessary. Move the tubs closer to increase consumption, further away to decrease consumption. **DO NOT PROVIDE STARVED ANIMALS FREE ACCESS TO THIS SUPPLEMENT.**

**IMPORTANT:** Consumption figures stated here are approximate. Clean, fresh water and a high quality, phosphorus containing mineral (such as Wind and Rain Minerals) and/or salt should be available at all times.
